MC-01 MAINTENANCE CART

STANDARD FEATURES

- Handles up to 1 **DENCO WEDGE** style A OR style B station.
- Tooling Nest holder that accepts standard nest blanks
- Optional push button station allows operation of the station in both full and single step operation.
- With the **WEDGE** station on the maintenance cart, it is possible for the operator to work on all sides of the **WEDGE** station out of the machine and walk around while de-bugging and set-up.

AVAILABLE OPTIONS

- **CONTROL BOX** This control box contains push buttons and a small operator interface. This allows operation of the station on the cart. Two palm buttons are provided to protect the operator.

DESCRIPTION

The maintenance cart accepts 1 **DENCO WEDGE** “plug and play” station. It is designed to aid the operator and maintenance personnel, when inserting and removing any **WEDGE** stations to and from the base machines.

Each **WEDGE** module is equipped with “on board” intelligence, it is plugged into the maintenance cart controller. The controller has the ability to cycle the machine. This allows for maintenance and operational personnel to de-bug and set up stations out of the machine.

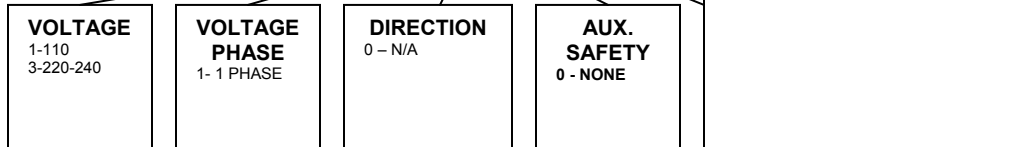

The sturdy, maintenance cart is equipped with a set of lockable swiveling casters, so steering the unit, even in the most restricted areas is very easy.

The table height is hydraulically controlled and operated so the **WEDGE** module can be lifted and lowered for easy loading and unloading.
